WAREHOUSE STOCK FLOW

Dania Samoda Renda

Purwadhika BDA Student Batch JCBDAAH-005

Terminator

Start, End

Marks the beginning & end of the entire budgeting process

Process

Identify budget goals, Draft initial budget plan, etc.

Represents a step or task within the budgeting workflow

Decision

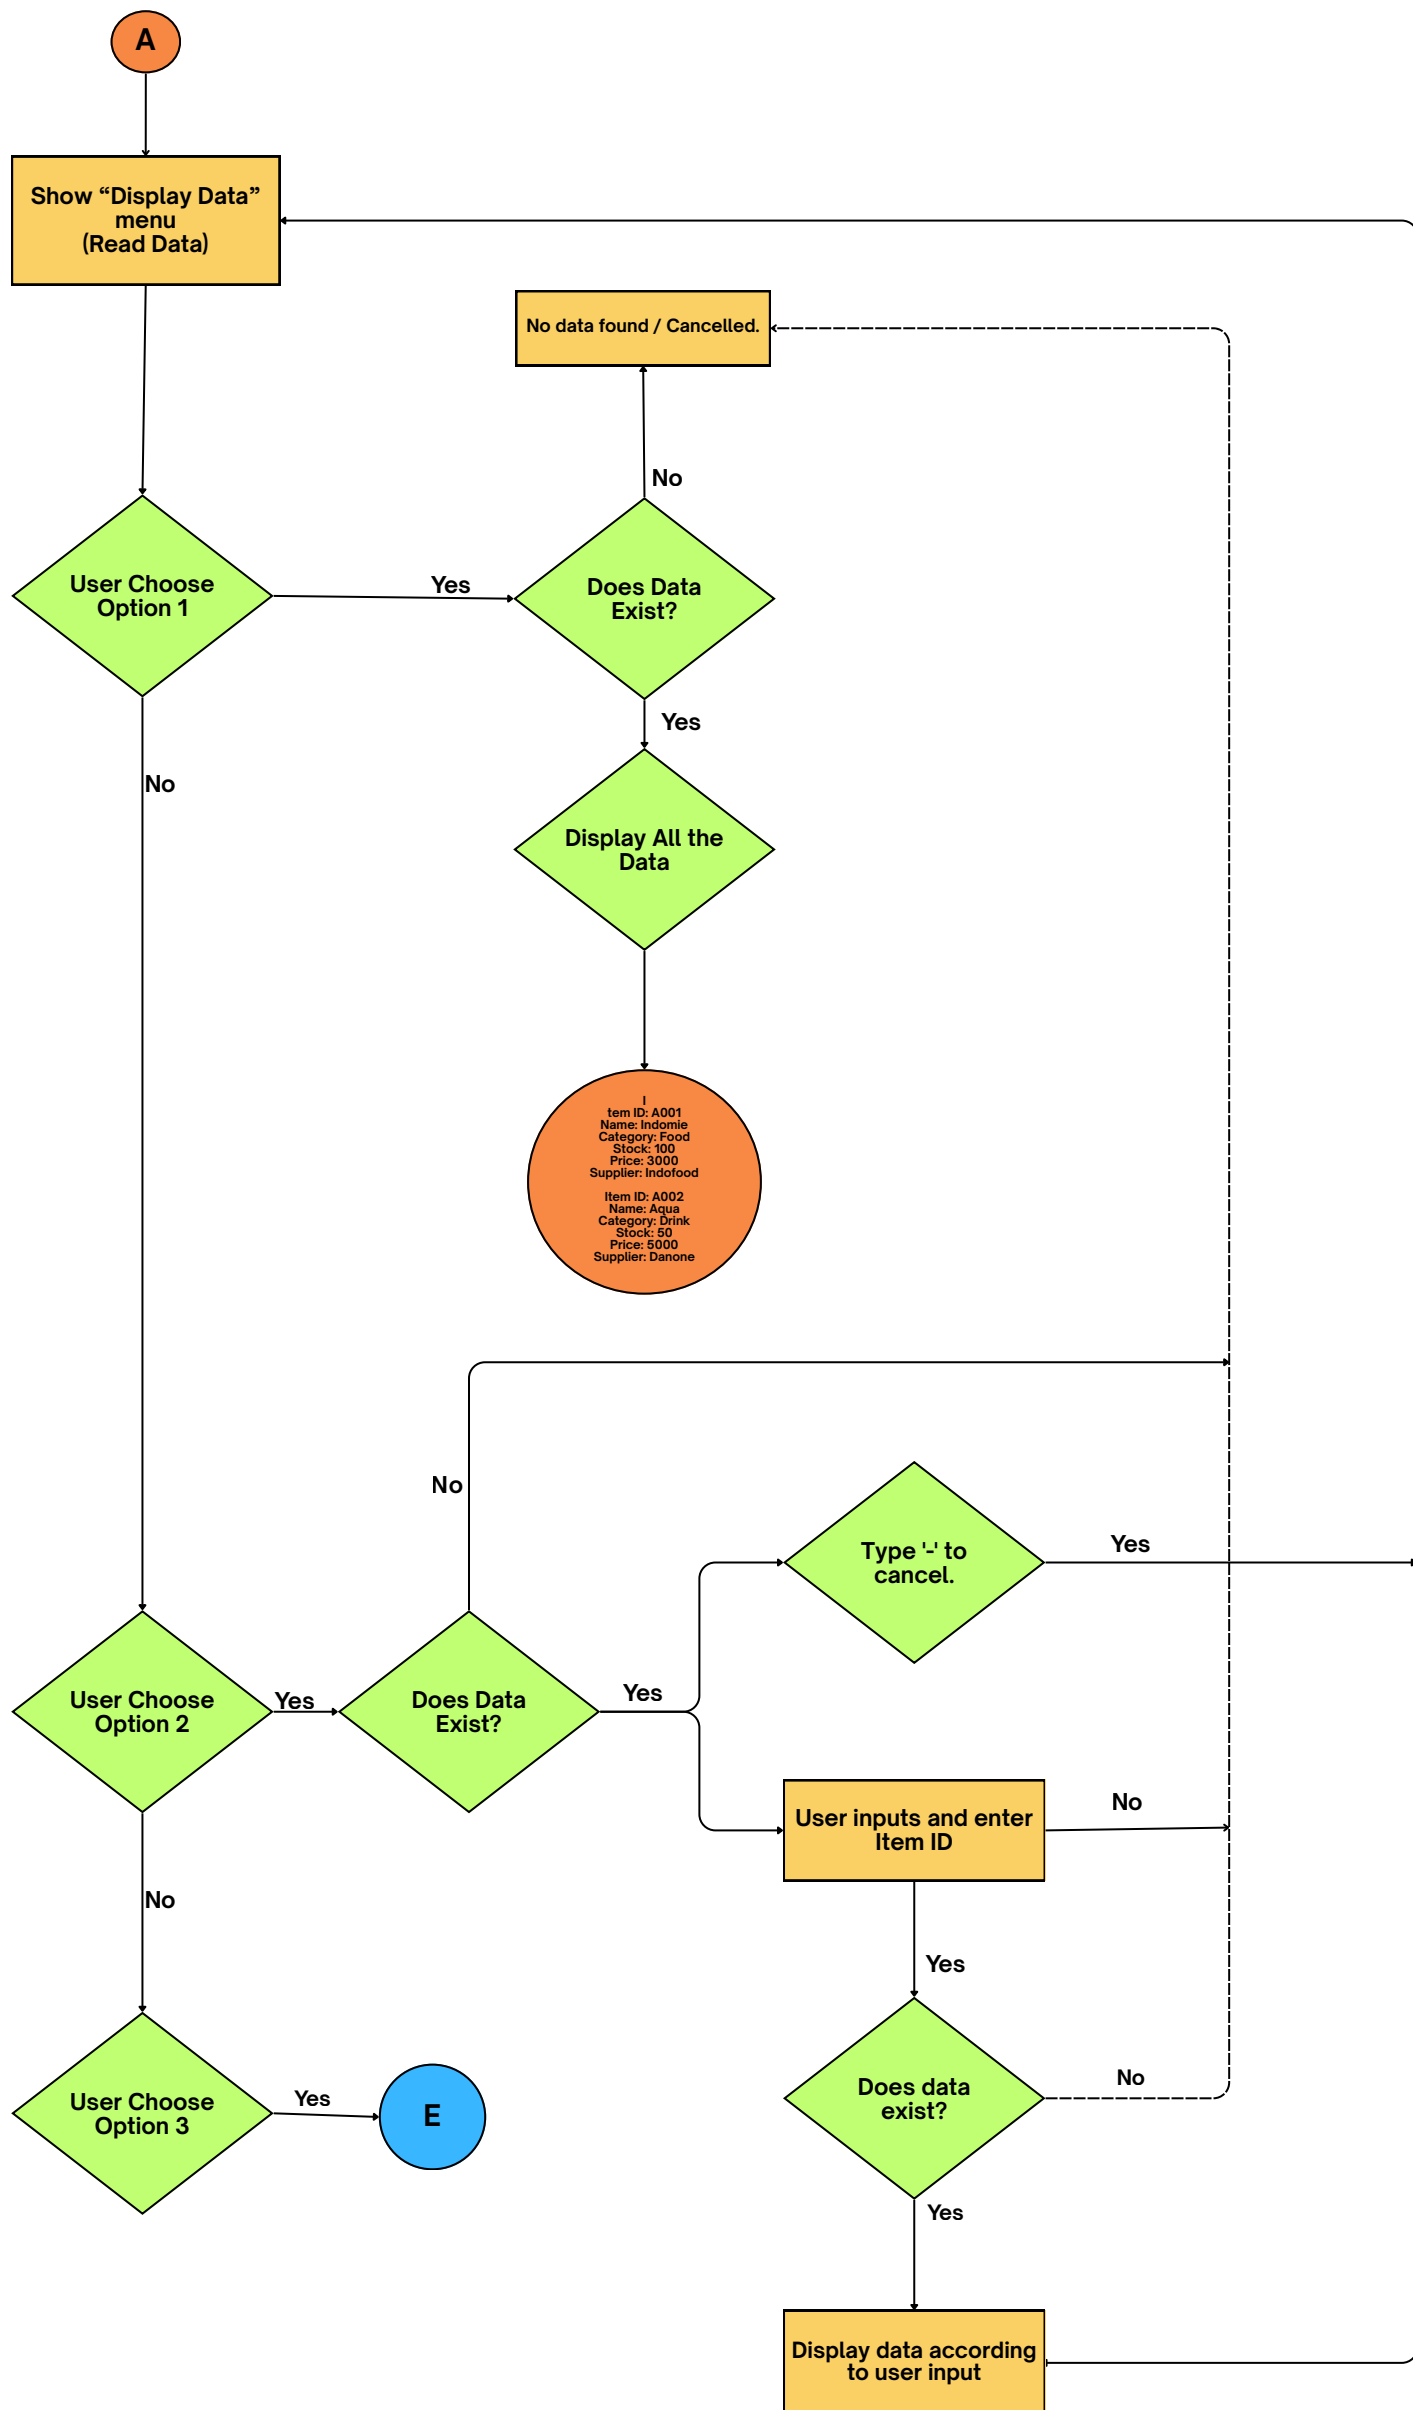

Is the data accurate?, Is the plan approved?

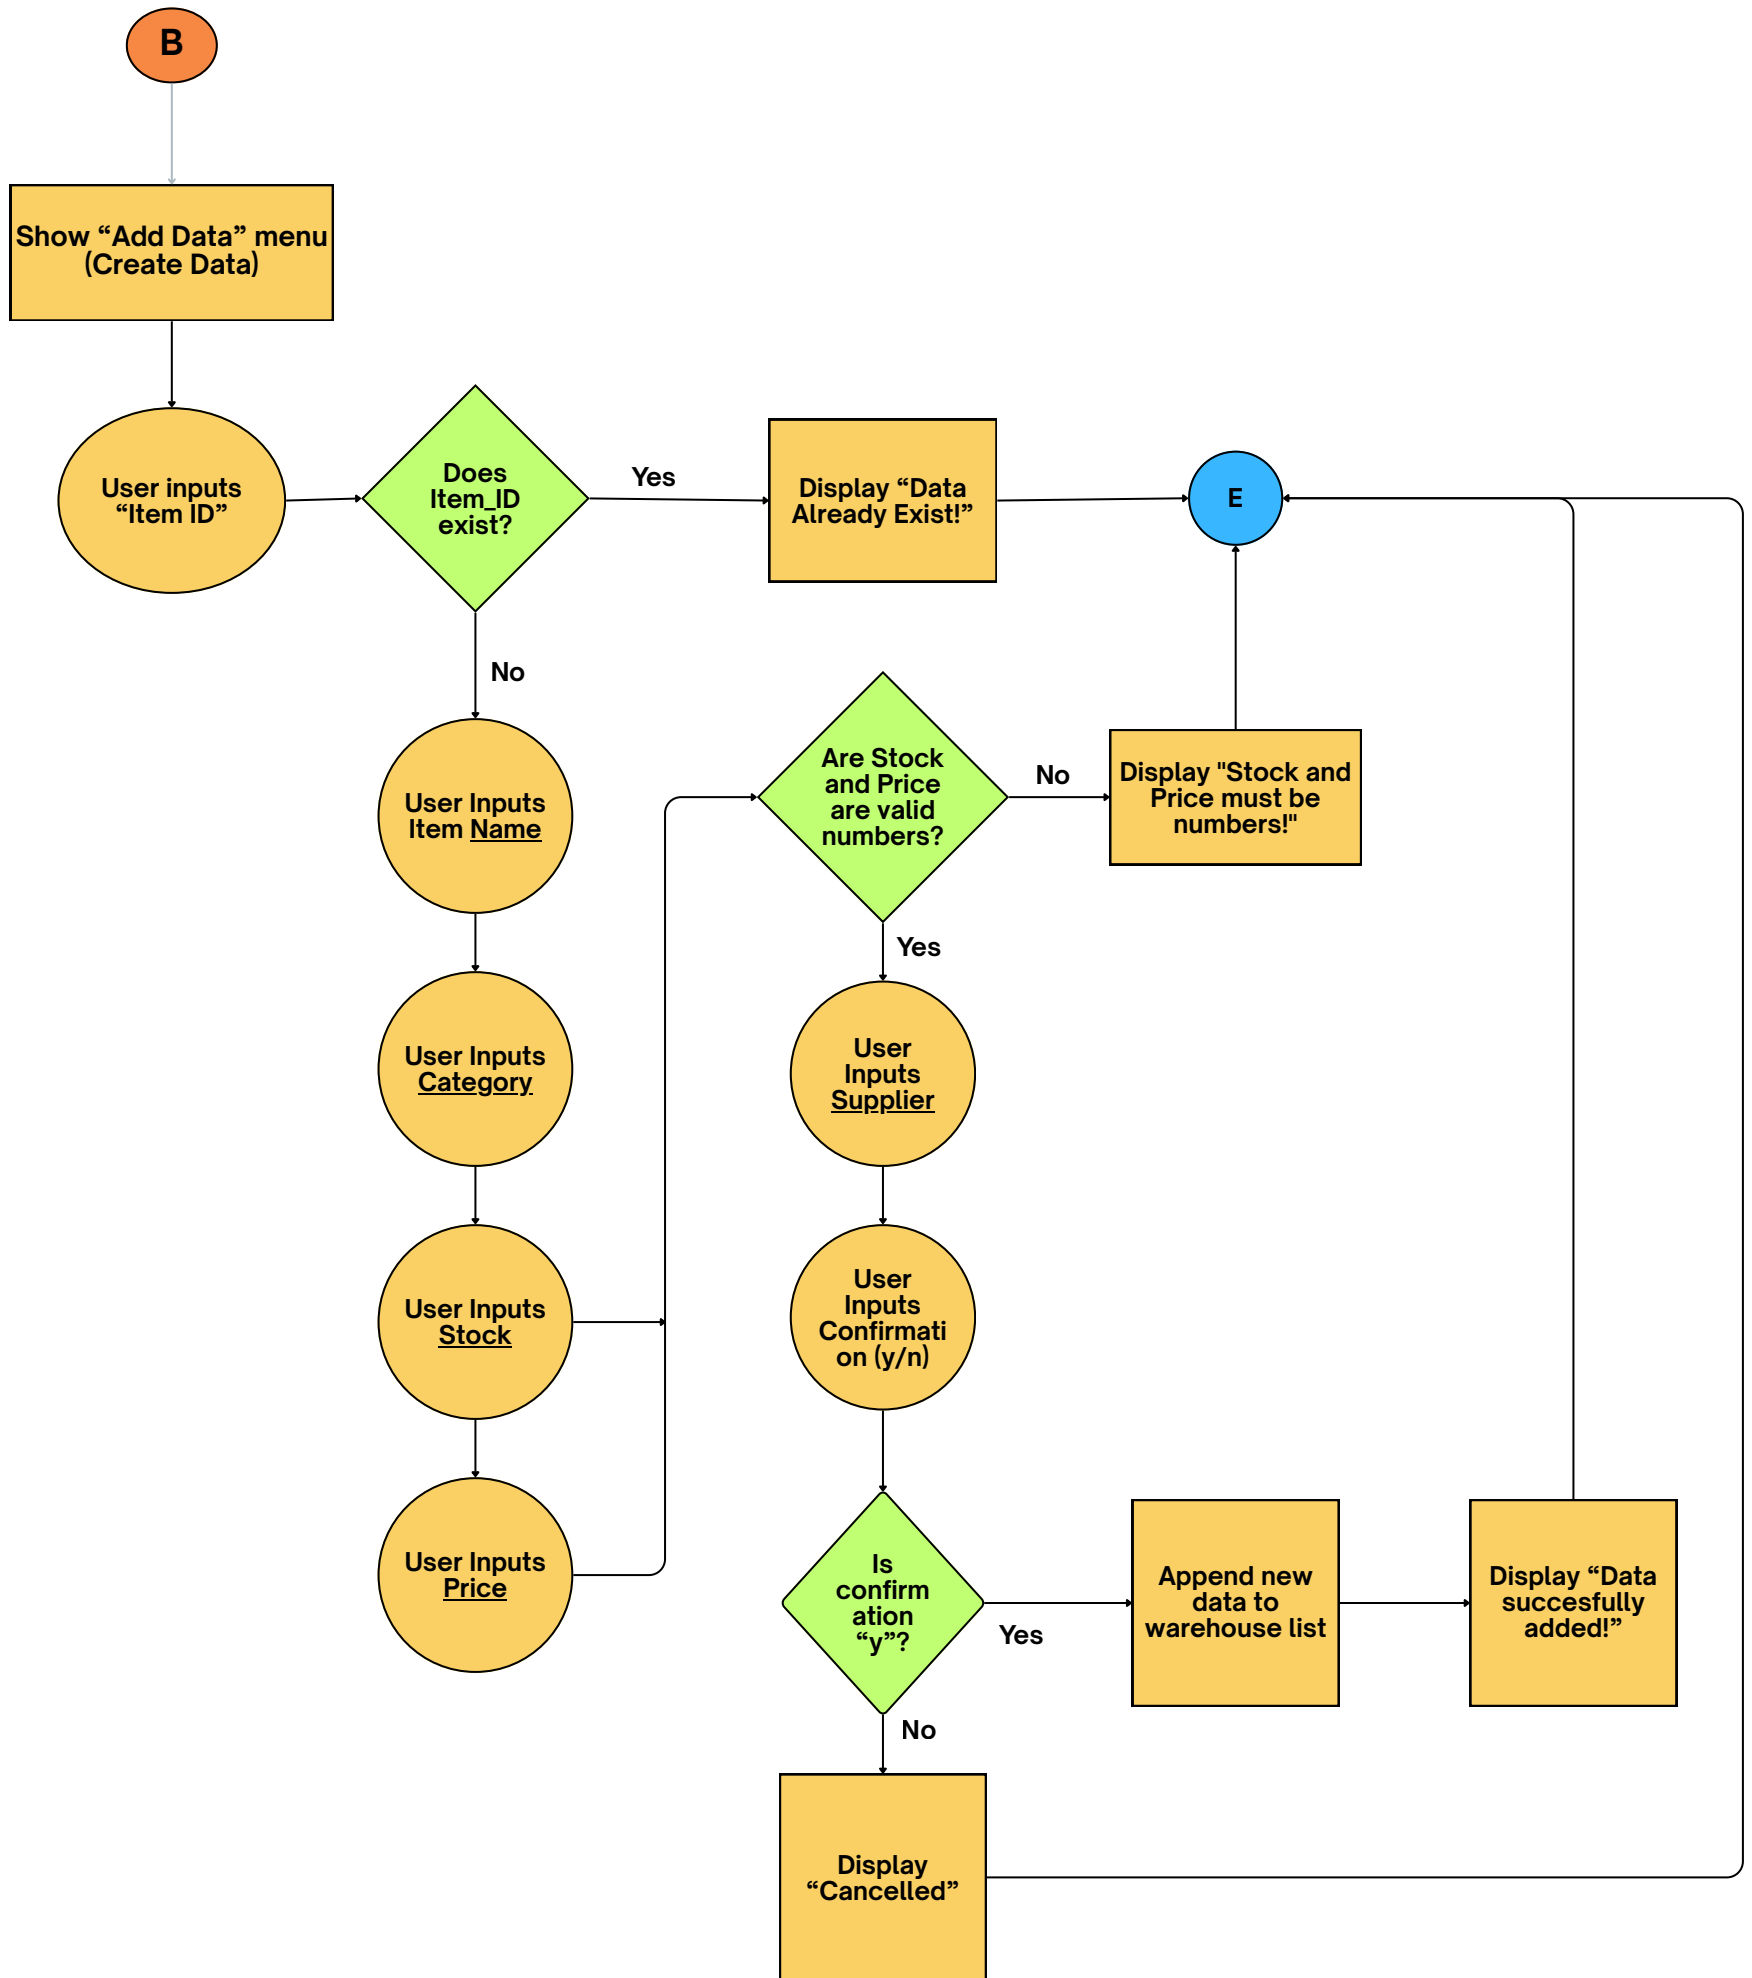

A decision point; the flow splits based on Yes/No outcomes

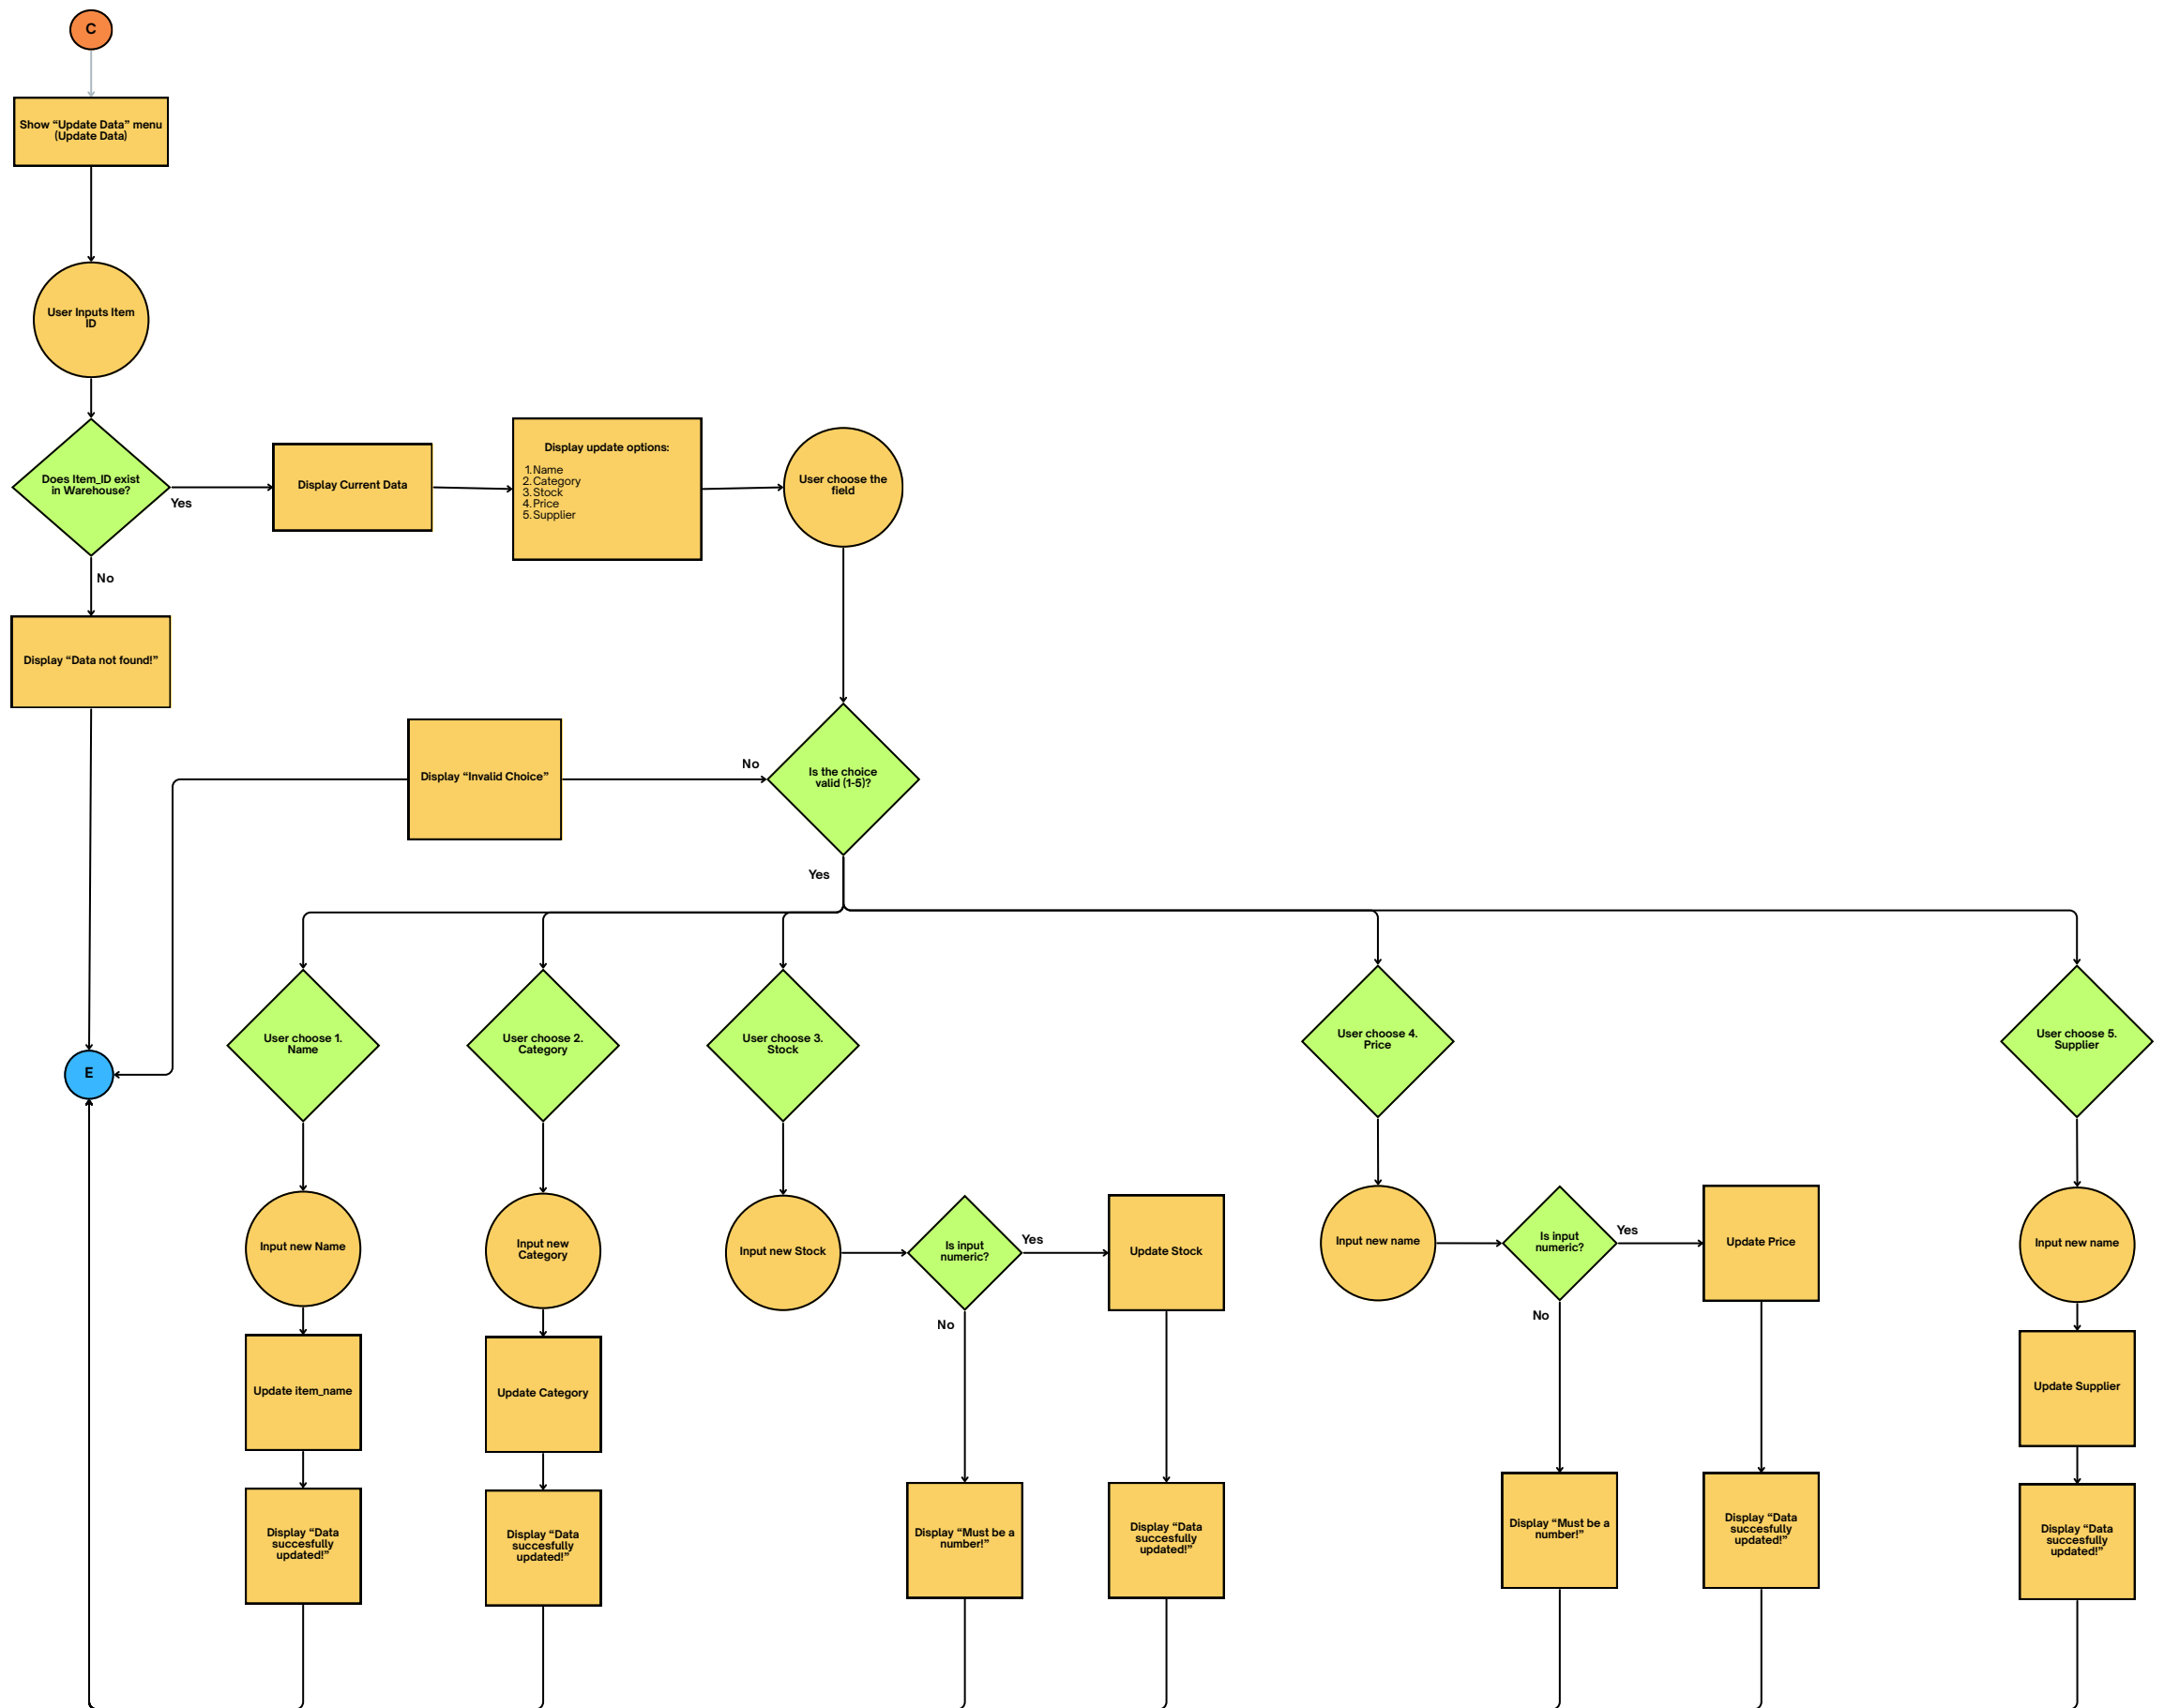

From Revise data collection & Make adjustments back to earlier steps

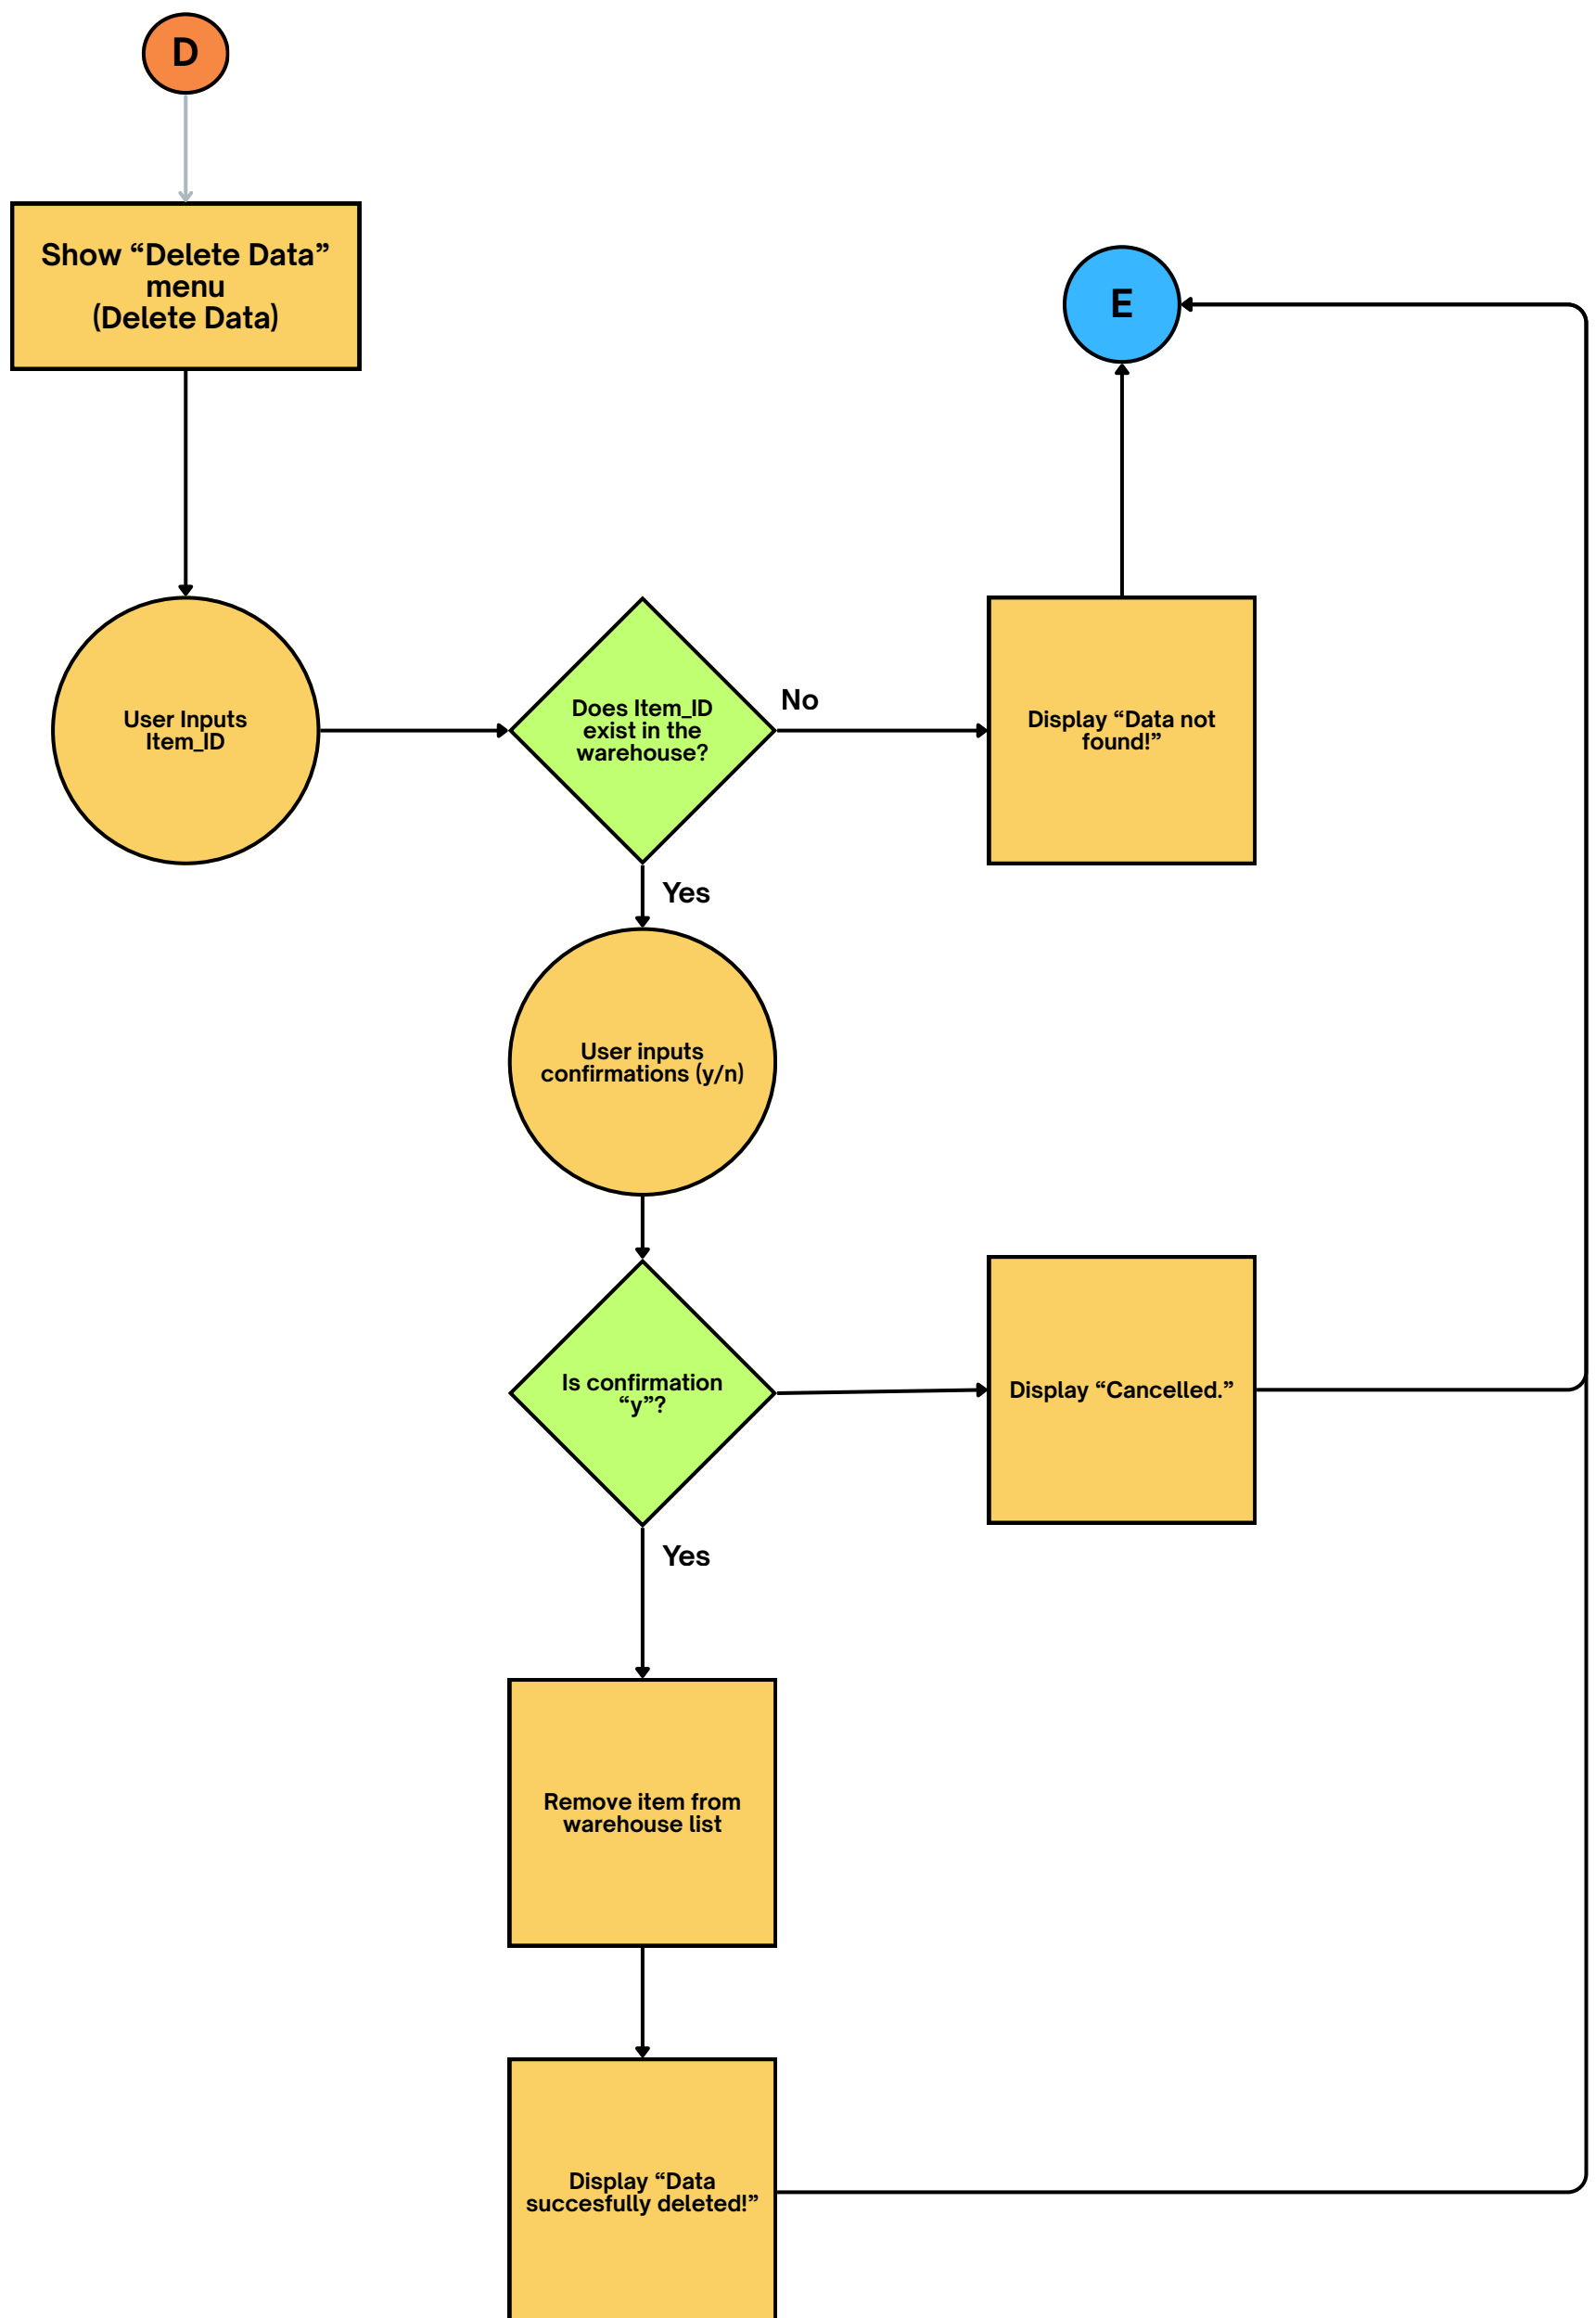

Represent re-evaluation or iteration when a condition is not met

```
graph TD; START([START]) --> Show[Show "WAREHOUSE STOCK SYSTEM"]; Show --> D1{User Chooses Ineligible Options}; D1 -- No --> D2{User Chooses Option 1}; D2 -- Yes --> A((A)); D2 -- No --> D3{User Chooses Option 2}; D3 -- Yes --> B((B)); D3 -- No --> D4{User Chooses Option 3}; D4 -- Yes --> C((C)); D4 -- No --> D5{User Chooses Option 4}; D5 -- Yes --> D((D)); D5 -- No --> D6{User Chooses Option 5}; D6 -- Yes --> Exit[Display "Exiting Program..."]; Exit --> END([END]); D6 -- No --> Invalid[Display "Invalid Option!"]; Invalid --> E((E)); E --> Show;
```
